Share an App

Summary

OZONE Defined:

 OZONE is a framework that allows users to find, customize, create and share applications they need to do their jobs.

OZONE allows Users to:

- Use/Run Applications created or added from the Store
- Manage Applications and App Components
- Create new Applications
- Share Applications with the Store
- Customize App layouts
- Organize App Components in your Applications

- OZONE Applications (Apps):
 - An OZONE App is a screen where a user dictates (for the most part)
 - which application components to load
 - which layouts to use
 - the arrangement of the app components

Purpose:

This tutorial explains how to create, customize and manage OZONE Apps.

- System Requirements:
 - Supported Application Server:
 - Apache Tomcat 7
 - Supported Databases:
 - MySQL
 - * Oracle, PostgreSQL and SQL Server will be tested in future releases.
 - Supported Browsers:
 - Internet Explorer 7 & 9
 - Firefox 17
 - Chrome 25

My Apps Window

Find Tools

Editing an App

Edit the following (optional):

- Title
- Icon
- Description

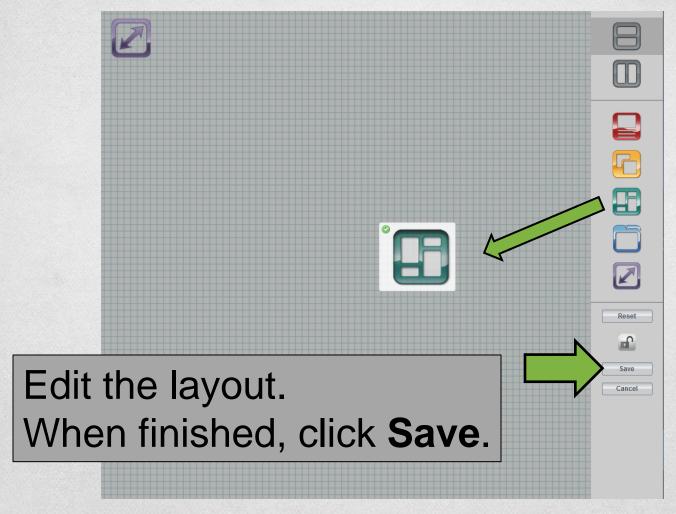

When finished, click OK.

Edit

The App Builder opens:

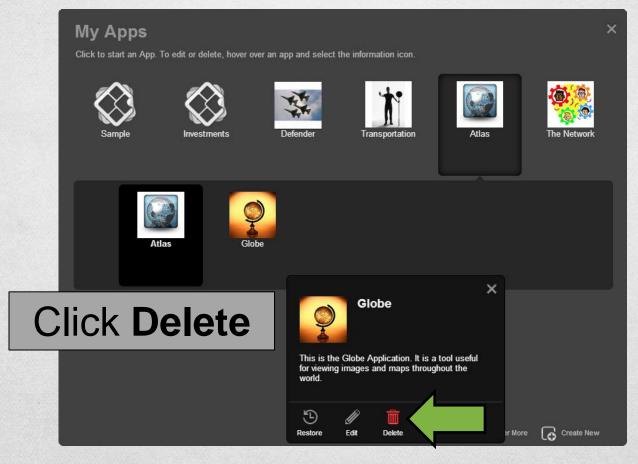

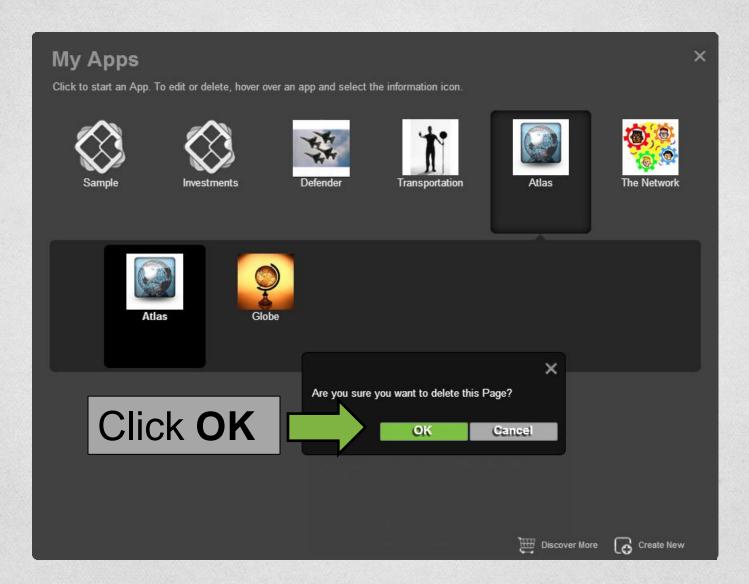

Delete i

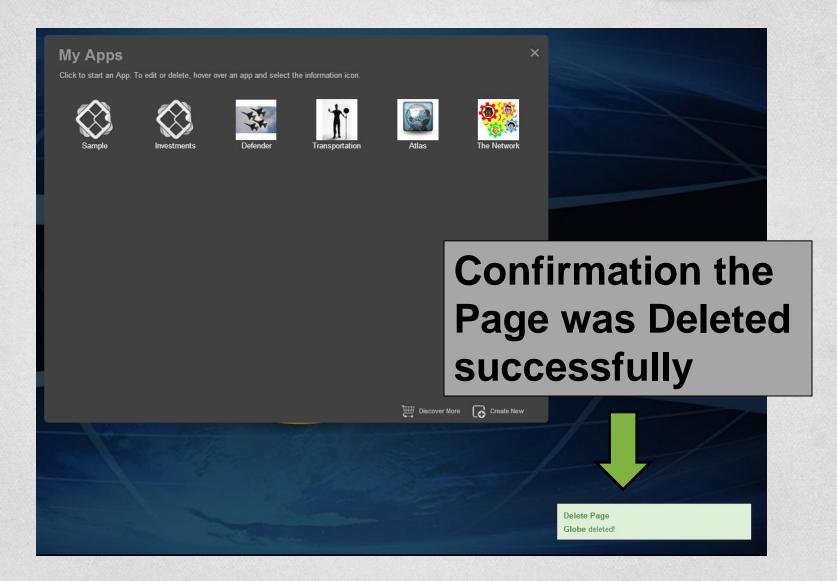

Owners can Delete their Apps and Pages. Users can Delete Apps.

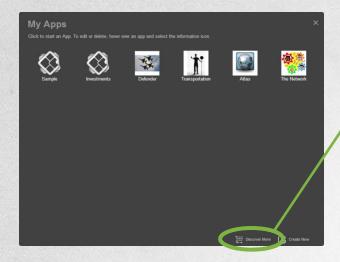

Discovery More

Discover More in the Store

Discover More

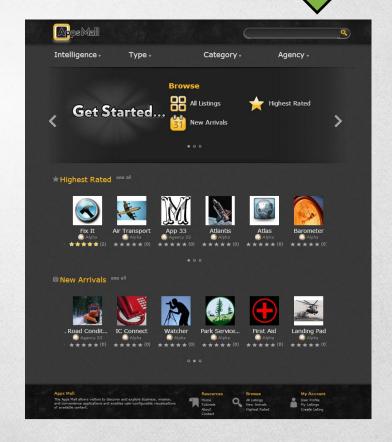

- takes the user to the Store □

From here, users can **search** for and **add** listings to their instance of OZONE.

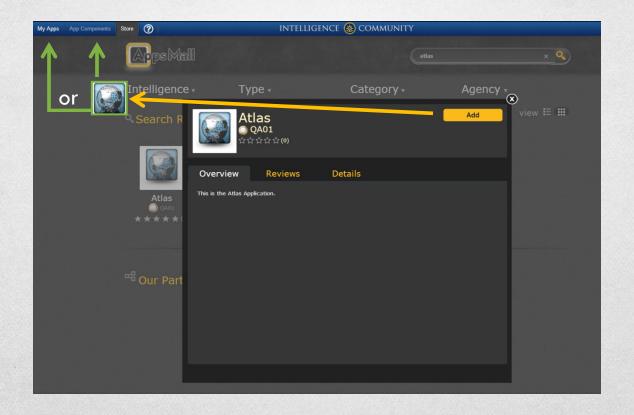

For more information about the Store, see the AML Overview Slides.

Add Listing to OWF

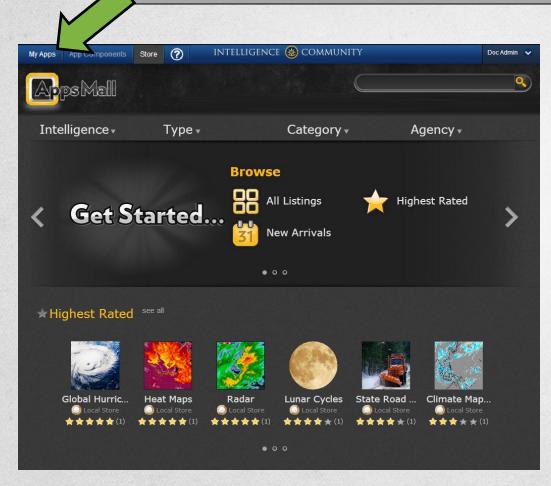

Depending on the listing type, adding a listing from the Store adds it to either My Apps or App Components.

Leaving the Store

Users exit the Store one of two ways:

- 1. After adding an App, it will automatically start.
- 2. Click My Apps and select an App to Start.

Creating an App

Create New App

Creating an App

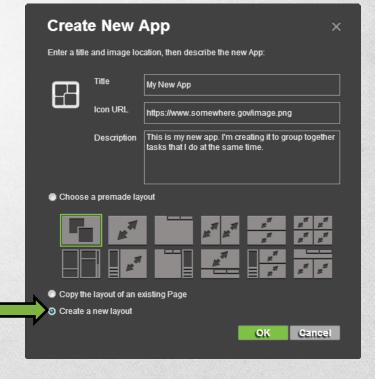

Create New

opens the CreateNew App Window

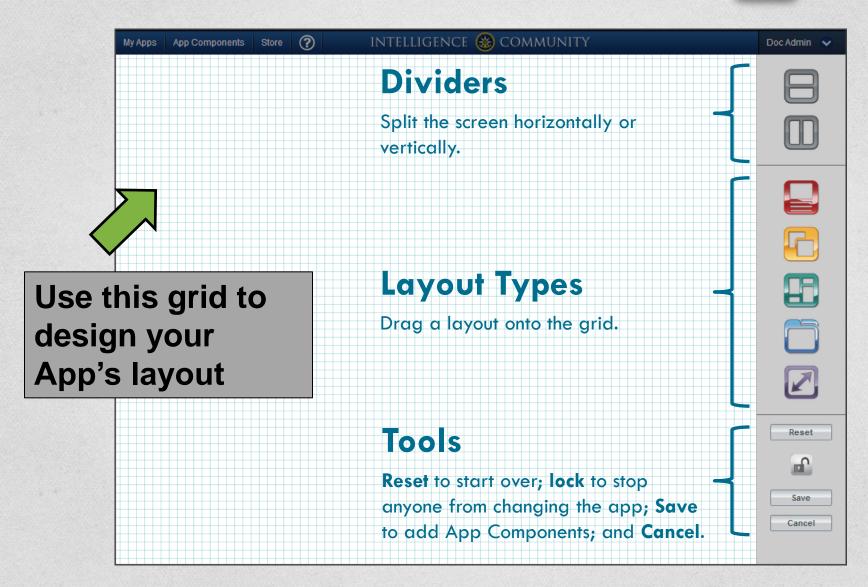

- 1) Enter a title, icon and description.
- 2) Select a layout.

If the user selects the Create a new layout, the App Builder starts.

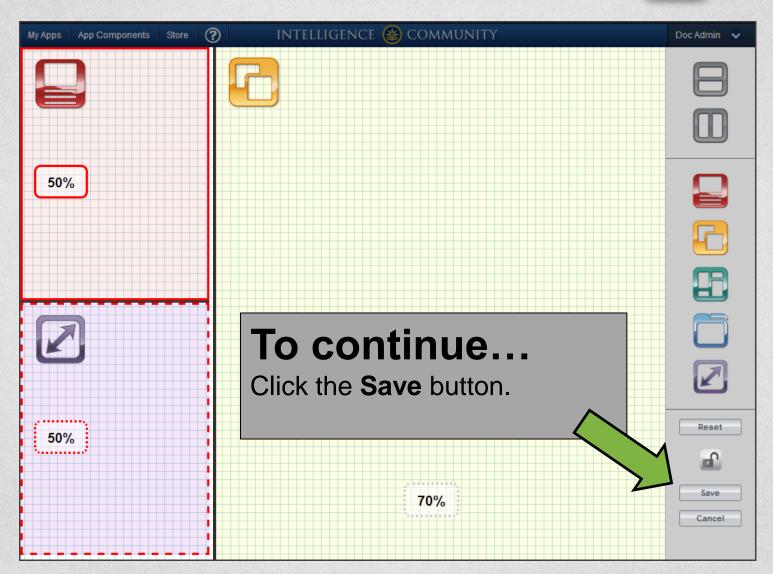

Using the App Builder

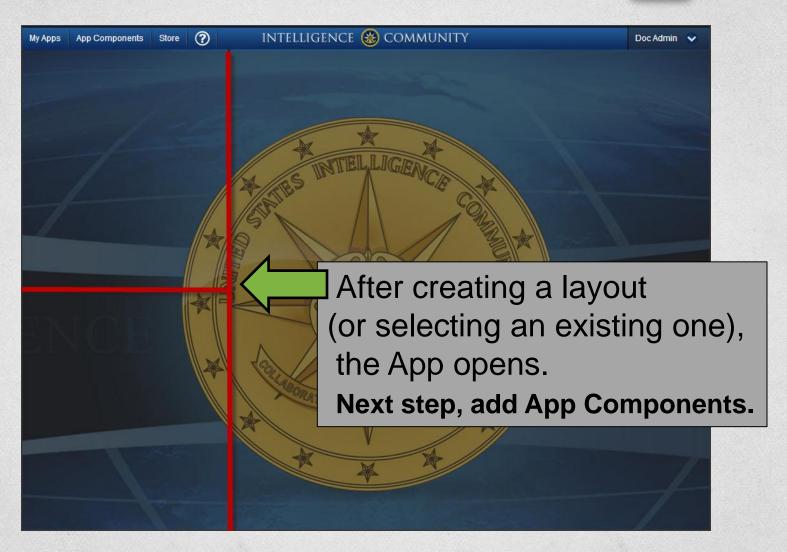

Using the App Builder

Adding App Components to a New App

App Components

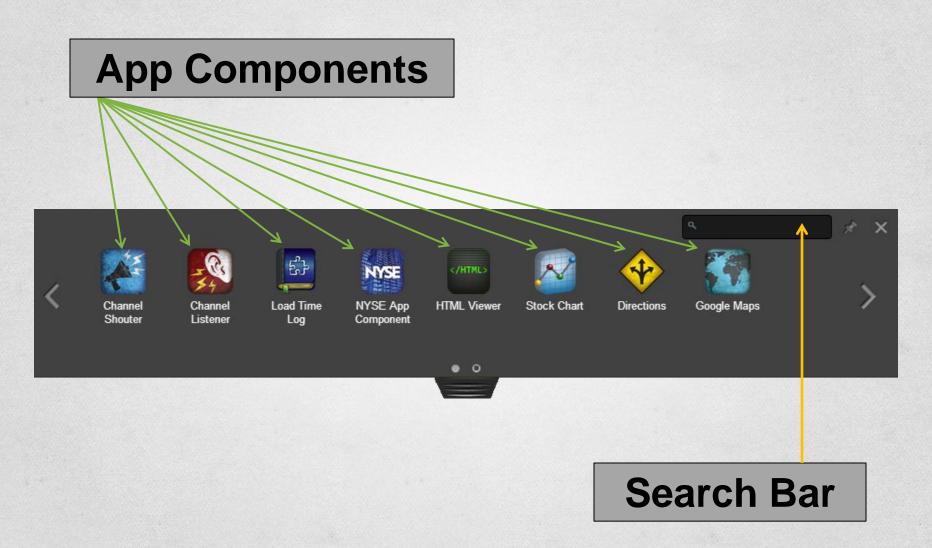

App Components are lightweight, single purpose tools that can be configured and added to an application.

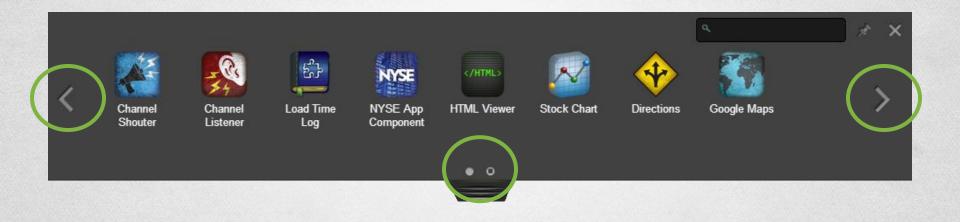

App Components are located in the App Components Carousel.

Navigate the carousel using the Pagination Arrows or Buttons

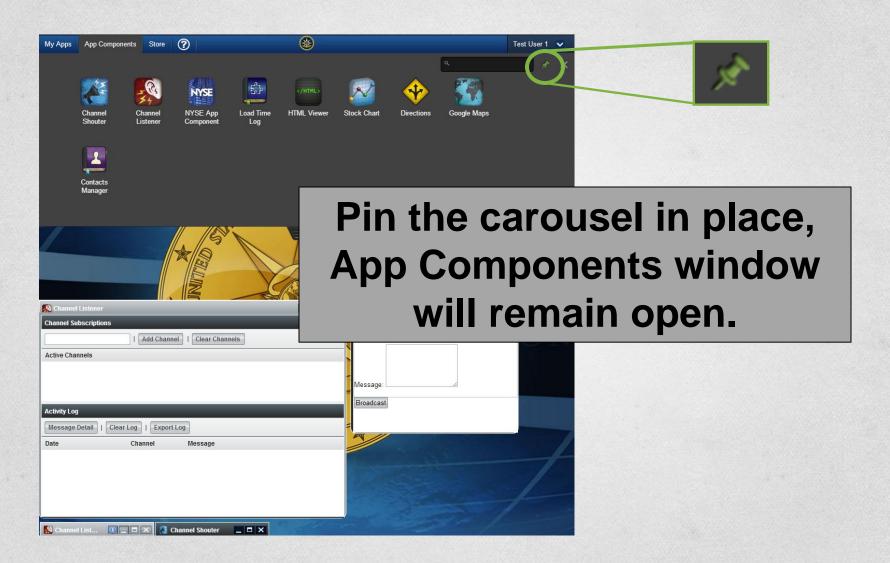

Pull down to view more App Components

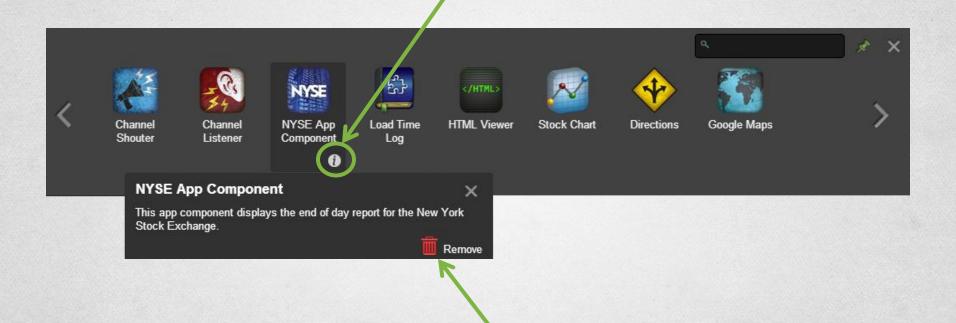

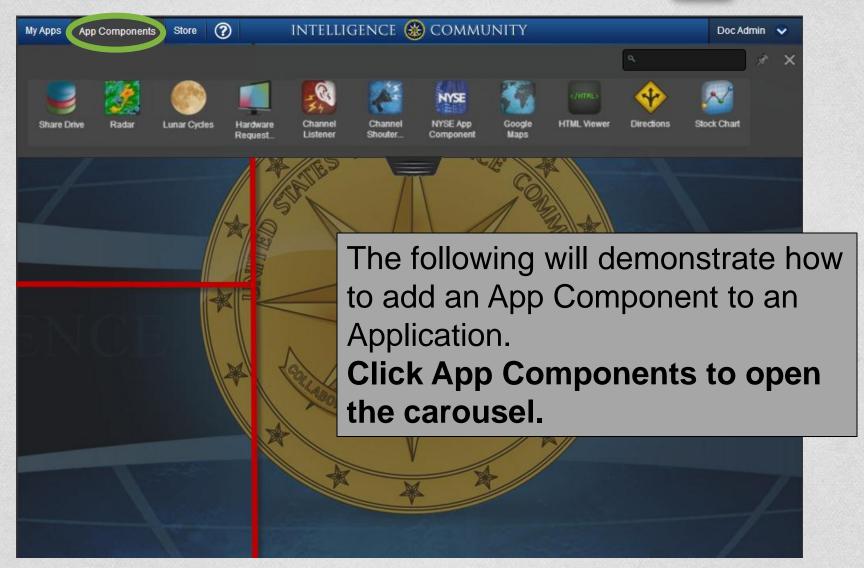

Click to see App Component's details

Click to Remove App Component

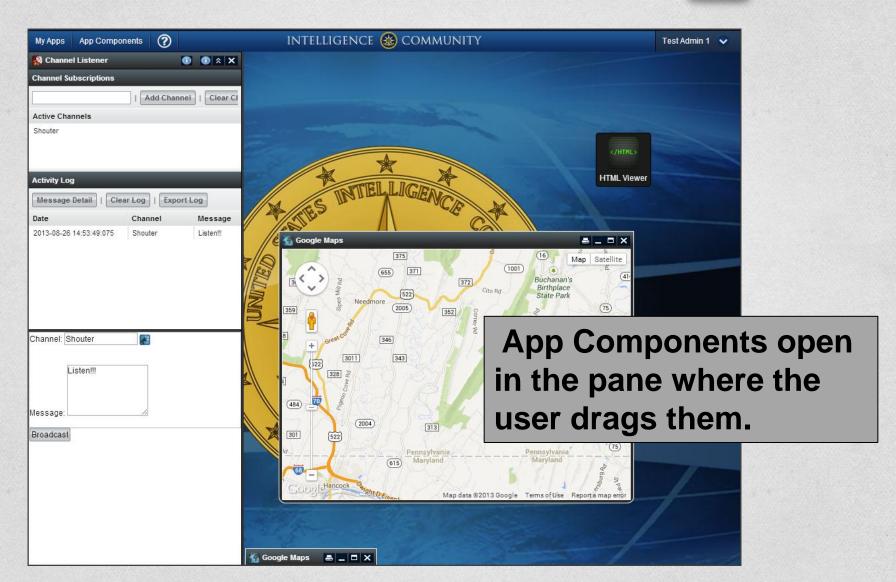

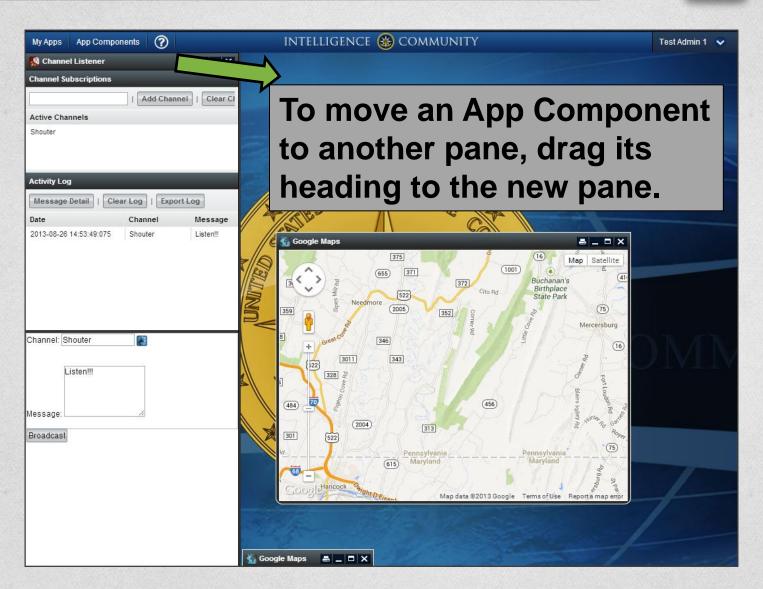

Using App Components

Sharing an App

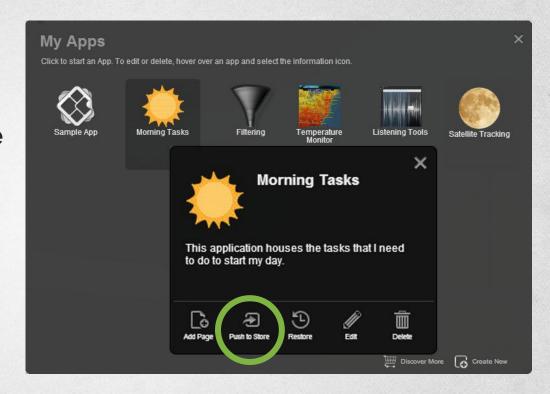

Sharing an App/ Push to Store

Sharing an App

- To share an App with other users:
 - 1. Open My Apps
 - 2. Click Push to Store

- The App will be added to the Store.
- After administrator
 approval, all Store
 users can search and
 discover it.

Summary

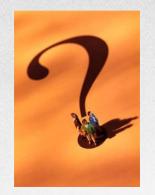

- OZONE App Definition
- My Apps Window
- App/Page Manager Buttons
 - Add Page
 - Push to Store
 - Restore
 - Edit
 - Delete
- Discover More
- Create New/Building an App
- App Components Carousel
- Sharing Apps with the Store
